                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  polymerase. These motifs represent a conserved region which affects the polymerase's ability to incorporate dideoxynucleotides labelled with fluorescein and cyanine family dyes. The method of the invention is useful in reverse transcription/amplification reactions. The method provides improved reverse transcription efficiency at lower enzyme concentrations relative to previous high temperature reverse transcription methods, and provide a wider range of usable salt concentrations. The use of the mutant DNA polymerase provides faster reverse transcription extension rates, and consequently less time is needed for the reaction. This motif is derived from DNA polymerases from
          Disclosure; Page 7; 23pp; English
                               Reverse transcribing an RNA, comprises performing a reverse transcriptase polymerase chain reaction amplification of a mixture using a mutant thermoactive DNA polymerase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           treating a transverse transcription reaction mixture which comprises the RNA, a primer, a divalent cation, and a mutant thermoactive DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    of the invention. The method for reverse transcribing an RNA,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequences given in AAB47791-97 and AAM48259-AAM48270 represent the native forms of motifs derived from DNA polymerases used in the method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 2; Page 4; 23pp; English.

The sequences given in AAB47791-97 and AAM48259-AAM48270 represent the native forms of motifs derived from DNA polymerases used in the method of the invention. The method for reverse transcribing an RNA, comprises of the invention a transcription reaction mixture which comprises the treating a transverse transcription reaction mixture which comprises the

RNA, a primer, a divalent cation, and a mutant thermoactive DNA

polymerase. These motifs represent a conserved region which affects the

DNA polymerase's ability to incorporate dideoxynucleotides labelled with thuorescein and cyanine family dyes. The method of the invention is useful in reverse transcription/amplification reactions. The method

Reverse transcribing an RNA, comprises performing a reverse transcriptase polymerase chain reaction amplification of a mixture using a mutant thermoactive DNA polymerase

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                concentrations relative to previous high temperature reverse transcription methods, and provide a wider range of usable salt concentrations. The use of the mutant DNA polymerase provides faster reverse transcription extension rates, and consequently less time is needed for the reaction.
                                                                                                                                                                                                                                                                                                                                        The C-terminal portion (AAR98144) of the 100 kDa thermostable DNA polymerase (AAR98143) of Thermotoga neapolitana (Tne) includes an O helical region. Tna polymerase is a thermostable enzyme suitable for use in DNA sequencing and amplification reactions. It can be obtd. from host cells, e.g. E. coli, carrying the DNA polymerase gene. Mutants having improved enzymatic properties may also be produced (see also AAR98144-47).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                        Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Site-directed mutagenesis was used to substitute a tyrosine residue for phenylalanine in the O-helical region of Thermotoga neapolitana (The) DNA polymerase. This residue corresponds to position 67 of a C-terminal fragment (see also AAR98144) of the enzyme. As a result of the mutation, the polymerase becomes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               non-discriminating against non-natural nucleotides such as dideoxynucleotides. The mutant enzyme, which may also incorporate a D233A mutation in the N-terminal portion (see AAR98146) or has the 5'-3' exonuclease domain deleted (see AAR98147), is active and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               09-JAN-1995;

                                                                                                                                                                                                                                                                                                                               single reading frame. The 3 sequences were compared with known polymerase amino acid sequences and spliced to generate the The sequence given in AAW13863. A complete amino acid sequence for
                                                                                                                                                                                                                                                                                                                                                                Polypeptide sequences (AAW13862-64) were deduced for all 3 reading frames of a DNA sequence (AAT60031) encoding the C-terminal region, including the O-helix, of the Thermotoga neapolitana (Tne) DNA polymerase. Frameshift errors generated during sequencing of the DNA prevented the entire amino acid sequence being deduced from a
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Mutant DNA polymerase, esp. from Thermotoga - has reduced exonuclease activity or dideoxynucleotide discrimination, useful for DNA amplification, synthesis and sequencing

                                                    dideoxynucleotides (ddWTP). They permit sequencing at high temperature; provide strong, clear sequences (increased signal to-noise ratio); can sequence more than 500 bases; reduce false stops in the sequence ladder; reduce template requirements 10-fold (when using 350 labeling); and also requirements for primer and labeled terminator. They increase sequencing efficiency with structure-containing or GC-rich templates; reduce film exposure times; do not generate sequencing artefacts with homopolymeric sequences and allow quantitation of bases in heterologous mixtures. This sequence represents the Thermotoga neapolitana The polymerase carboxyl terminal which is described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                   methods, also for DNA labeling and for synthesis of cDNA from mRNA templates. (1) have higher thermostability than known enzymes (e.g. 50% retention of activity after 60 min at 90 plusoC), and may be free
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DNA sequencing, amplification and synthesis methods, using mutant forms of Thermotoga neapolitana polymerase with reduced exonuclease activity or reduced discrimination against dideoxynucleotides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              double-stranded DNA or synthesizing DNA which use a mutant Thermo neapolitana DNA polymerase (I) or its fragments. (I) are used for

It can be obtd. by expression of a DNA construct (AATS8155) created, by restriction digestion of pW284-derived DNA also AATS8135). When expressed in E. coli, The M284 delB showed no detectable polymerase activity. In contrast, a The M284 mutant

It can be expresse using a DNA construct (AAT58145) created by restriction enzyme digestion. When expressed in E. coli, The M233 produced no detectable polymerase activity. In contrast, a The M284 mutant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Deletion mutant The M323 (AAW11524) of Thermotoga neapolitana DNA polymerase The (see also AAW11513) has an artificially created methionine at amino acid position 323 as the initiator methionine in the 3' exonuclease domain of the enzyme. It can be expressed in the 3' exonuclease domain of the enzyme.
mutagenesis. When expressed in E. coli from a T/ or The M316 produced no detectable polymerase activity. mutant (see also AAW11514) was active.
                                                     Deletion mutant Tne M316 (AAW11523) of Thermotoga neapolitana DNA polymerase Tne (see also AAW11513) has an artificially created methionine at amino acid position 316 as the initiator methionine. It can be expressed using a DNA construct (AAT58144) created by introducing a Met residue at position 316 (and a corresponding NcoI site) into the native gene (AAT58134) via site-directed mutagenesis. When expressed in E. coli from a T7 or trc promoter,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DNA polymerase; The; thermostable enzyme; protein engineering; thermostability; DNA sequencing; amplification; PCR; polymerase chain reaction; exonuclease; Thermotoga neapolitana
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      07-JUN-1996;

                                                                                                                                                                                          Sequences AAW83969 to AAW84011 represent The (Thermotoga neapolitana) DNA polymerase mutants which can be used in the method of the invention of identifying and analysing polymorphic DNA. The method comprises reacting a DNA sample with at least one DNA polymerase having reduced ability to add non-templated nucleotides to the 3'-terminus and amplifying the fragment, followed by analysis, identification or typing of the amplicons. The DNA polymerases used are thermostable and the
amplifying the fragment, followed by analysis, identification or typing of the amplicons. The DNA polymerases used are thermostable and the modification or mutation is in the O-helix of the The DNA polymerase. Analysis of polymorphic DNA is particularly used to establish relationships between individuals (forensic or paternity testing), particularly where the polymorphism is a mini- or micro-satellite or short tandem repeat. More generally the DNA polymerase and its mutant form are useful in any process that involves nucleic acid amplification, e.g. identification of pathogens, cancer or genetic diseases (cystic fibrosis, haemophilia, Alzheimer's disease), screening organs or tissues before transplanting, diagnosis, plant breeding, Note: This sequence is not provided in the specification. It has been created by modifying the wild-type Tne DNA polymerase sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Tne; O-helix; DNA polymerase; polymorphic; amplicon; thermostable; mutant; forensic; paternity testing; nucleic acid amplification; cancer pathogen; genetic disease; cystic fibrosis; haemophilia; transplanting; Alzheimer's disease; screening; organ; diagnosis; plant breeding.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 08-FEB-1999

                    DNA clone pM284 (AAT58135) produced by restriction enzyme digestion of the native gene (AAT58134). The N-terminal deletion eliminates the 5' exonuclease activity of the enzyme. The M284 has a half-life at 97.5 deg C of 18 min compared with 5 min for the native enzyme. Amino acid substns. in the 3' exonuclease domain of The M284 (see also AAW11516-22) yield enzymes esp. suitable for DNA M284 (see also AAW11516-22) yield enzymes esp. suitable for DNA

                       DNA polymerase mutant The M284(D323E) (AAW11515) lacks the N-terminal 283 amino acid residues of the native enzyme (AAW11513) of Thermotoga neapolitana and contains a D323E substn. In the 3' exonuclease domain (numbering according to the native enzyme). It is obtd. by expression of a DNA clone (AAT58136) created by site-directed mutagenesis of construct pM284 (see also AAT58135). The M284(D323E) has no significant 5' or 3' exonuclease activity and has a half-life at 97.5 deg c of 12.5 min compared with 5 min for native The and 8 min for native Taq. It can be used in DNA sequencing reactions and for the amplification of double stranded DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAW11515 standard; Protein; 610 AA

                               mutagenesis of construct pM284 (see also AAT58135). The M284 (H325D) has no significant 5' or 3' exonuclease activity and has a half-life at 97.5 deg C of 5 min (unchanged from the native enzyme).
                                                                                                 DNA polymerase mutant The M284(D325D) (AAW11516) lacks the N-torminal 283 amino acid residues of the native enzyme (AAW11513) of 'Phormotoga neapolitana and contains a E325D substn. in the 3' exonuclease domain (numbering according to the native enzyme). It is obtd. by expression of a DNA clone (AAW58137) created by site-directed

                        DNA polymerase mutant The M284(Y464F) (AAW11517) lacks the N-terminal 283 amino acid residues of the native enzyme (AAW11513) of Thermotoga neapolitana and contains a Y464F substn. in the 3' exonuclease domain (numbering according to the native enzyme). It is obtd. by expression of a DNA clone (AAF58138) created by site-directed mutagenesis of construct pM284 (see also AAM788135). The M284(Y464F) has no significant 5' exonuclease activity and only 1.9% of the native 3' exonuclease activity. Its half-life at 97.5 deg C is 16 min compared with 5 min for native The and 8 min for native Taq. It can be used in DNA sequencing reactions and for the amplification of double stranded DNA.
                                                                                                                                                                                                                                                                                                                                                                                          31-MAY-1996;
